

FUNGE X NAIL FUNGUS PEN

- Proven effective formula against nail fungus
- Kills fungus on the nail within 20 seconds!
- Scientifically proven effective in fighting/treating nail fungus
- Prevents spread of the infection and helps to prevent re-infection

General advice: Before using FungeX Nail Fungus Pen, read the instructions carefully, even if you have used this medical device before. The information contained in a new pack may have been revised in order to reflect the latest scientific insights and data. Nevertheless, you should use FungeX Nail Fungus Pen with care in order to obtain good results. Keep these instructions – you may need to refer to them during treatment.

Application: FungeX Nail Fungus Pen is a medical device that helps in the treatment of fungal nails (onychomycosis). FungeX Nail Fungus Pen has been proven to be effective against fungal nail infections. The unique formula containing an 'INSTANT KILLER', contains ingredients that penetrate the surface of the nail, killing fungi within 20 seconds. The liquid forms a layer on the nail, creating an environment that is unfavourable to fungi growth and acting as a physical barrier to prevent the spread of moulds.

To achieve faster, better results, carefully filing the fungal nail once a week is recommended. If treatment is stopped, the fungal nail will return more quickly. It is therefore important to continue using FungeX Nail Fungus Pen until the fungal nail has gone.

As damp environments are one of the causes of fungal nail infections, it is strongly recommended that you wear socks made only of absorbent materials, such as cotton or wool. This is important, as moulds are commonly found in moist environments, where they can multiply. If you have a fungal nail, it is important that you keep your feet dry.

Dosage and use (for adults only): FungeX Nail Fungus Pen is for external use only. Carefully twist the back of the pen until a drop of liquid is released. Apply the product to the affected area twice (mornings and evenings, for instance) until the fungal nail has fully grown out. Thanks to the 20-second instant kill formulation, the applicator Pen does not become infected with the fungi, preventing infection/reinfection of the other nails and protecting against any return of the moulds. FungeX Nail Fungus Pen can be combined with the use of oral antimycotics.

Mode of action: Thanks to a unique combination of ingredients, FungeX Nail Fungus Pen forms a layer, which creates an unfavourable environment for the growth of fungi in the nail plate. It also forms a physical barrier that inhibits the spread of moulds. FungeX Nail Fungus Pen reduces the nail's acidity, creating an unfavourable environment that stops the growth and spread of fungi.

Use during pregnancy and/or breastfeeding: No information is available regarding the use of FungeX Nail Fungus Pen during pregnancy or the breastfeeding phase. If you are pregnant or breastfeeding, consult your doctor or pharmacist before using.

Possible side effects: Possible side effects includes: erythema, irritation, edema, pain, nail discoloration and onycholysis; Allergic reactions.
